Lifting Pins are single-acting Ball Lock Pins with a solid, one-piece body and four balls for high tension loads. Positive locking until released by pushing the button. Sturdy forged shackle for heavy lifting. Available in stainless steel, or alloy steel with manganese phosphate finish.

NEW Threaded Lifting Pins replace the balls with three threaded portions and are great for retrofitting fixtures with tapped holes. These should be hand-tightened and only used for straight pull applications. Available in both Steel and Stainless.
